**Job ID:** 4291  
**Title:** Automation Engineer  
**Location:** Route 128 Central  
**Type of Job:** Software QA

### Job Description:

Lynx has already helped a couple of individuals find amazing opportunities working for this client in particular, who is currently seeking an Automation Test Engineer in one of the hottest areas of focus today: social media.

People are buying what they are selling, too, as they tout an impressive client list that includes the likes of J. Crew and Amazon. It's no wonder Inc. 500 recently named one of the fastest growing private companies nationwide.

The client understands that true talent is not always defined by years of experience, so recent CS grads and junior programmers take note: this is a unique opportunity to get in with a respectable company that will build a lot more for you than just a resume. You would enjoy a lot of learning in this role, and would have some big responsibilities by implementing and executing automated tests within the automation framework for its award-winning SaaS solution.

Speaking of you, ideally you would have: BS in Computer Science (or a relevant Engineering degree), 1-3 years automation experience (or relevant internship), open-source and/or LAMP development with a working knowledge of PHP, Python, Perl, or Ruby.

SQL and database experience is a huge plus.

The Company boasts a number of respectable honors, including one for its culture in being named one of the Boston Business Journal's Best Places to Work. You would enjoy working alongside their bright, passionate Social team in a fun setting where hard work is rewarded, and long-term career development is realized.

**Job ID:** 4275  
**Title:** Software Engineer - Embedded  
**Location:** Boston/Cambridge/Urban  
**Type of Job:** Software Development

### Job Description:

A long-standing Lynx client in the high-end consumer electronics space is seeking a talented Software Engineer with a passion for innovation to join its embedded team who are at the helm of changing the way the world thinks about home entertainment.

Our client is among the elite in their industry, but their culture is not elitist by any stretch (seriously, divas needn't apply); instead, they have successfully sought the brightest bulbs in the business from all over the world to lead their charge in unveiling the next big thing in audio. You are who is missing.

And speaking of you, ideally you would have: C/C++, experience writing embedded software, 3+ years of experience in software development, a strong Linux understanding (with kernel development)

A strong knowledge of TCP/IP networking and/or WiFi is a huge plus.

The Company, notable for both its state-of-the-art acoustic products and rapid workforce growth (try a factor of five in the last four years), touts a very low turnover rate, as well as a generous incentive plan that rewards thought leadership and hard work.

**Job ID:** 4296  
**Title:** Technical Support Software Engineer  
**Location:** Route 128 Central  
**Type of Job:** Software Product Tech Support

### Job Description:

One billion transactions were completed securely today over the web, thanks to this Lynx client. This precious cargo that includes personal identification numbers, customer identities and other confidential information is always subject to leak so, it's no wonder Fortune 100 companies like Amazon choose the very best in web security.

They choose our client, who happen to be seeking a special Software Engineer in a customer-facing role. Is that you? If so, you love developing as well as helping customers tackle the various challenges they may experience while using the software. As a recipient of Tier 2 calls, you can rest assured that the cases you work on are properly screened and documented prior to your involvement, thus rendering this role a true mix of technical challenges and customer interaction.

That said, you should know that the Company boasts an impressive customer base, including the likes of Amazon and Forrester Research. They are also no stranger to superlatives, having been named in the Best of Interop Awards for Networkworld and were named Best In Class against all of their direct competitors by Network Computing.

You need: Experience in a customer-facing support role, excellent written/verbal skills, a proficiency in TCP/IP networking, familiarity with Client/Server based applications, and strong understanding of Linux.

Better for you if you have: TCP Layer4-7 networking (e.g. Application Firewalls/XML Gateways).

Suffice it to say, this job ensures that no two days are ever the same, and the surprise element to what the day will hold or, who you will help is something that the ideal match would find enjoyable. The demand for web security is only waxing to keep up with the advancements of cyber-theft and crime. Joining the very best in web security begins with submitting your resume (securely!).
